Best regards,
The Inspera Team

Important information

Safe Exam Browser:
Support for version 2.1.6 and 2.1.7 ended today, 2nd March 2018.
Version 2.1.8 now recommended for Windows.

Please note. Support for version 2.1.5 will continue until 1st July 2018, as this version is in widespread use in computer labs, and it does not have the potential security or performance issues of versions 2.1.6 and 2.1.7.

Postponed to maintenance update March 9th:

- New option to show Candidate name and Social Security number during exams. Participants in beta will be notified when available.

Postponed to April 6th release:

- Inspera API for Appeals
- Support for transferring grades to FS for unlinked tests

New features

Flagging of candidates

No activation required

Flagging allows Planners and (Chief) Invigilators to highlight candidates in Monitor.
Flagging a candidate makes no other changes to the candidate or submission.
The purpose is essentially to have a visual marker of candidates that need follow-up or other actions at a later stage.

- Add and remove flags individually or in batch
- Filter and sort by flag
- Create and share Views with flagged candidates only

Learn more in Inspera Knowledge Base

Text to Speech for candidates

Contact Service Desk for activation.

Text to Speech is an aid that allows candidates to have text based content read out loud in the active UI language. When enabled, Text to Speech is available for all candidates on the test.

Question 2a

Which part of vertebral canal will show secondary curves with concavity backwards?

Exam Day

Candidate tools and aids

- ☐ Enable Spell Checker Learn more
- ☑ Enable Text to Speech reading aid Learn more
- ☐ Disable sketches in essay questions Learn more

Please note. Text to Speech for PDF Panels is not yet available.

Inspera API released

Contact Service Desk for activation.

For automatically generated documentation, visit api.inspera.com
For general documentation, visit Inspera Knowledge Base

New features

In closed beta *The following features are available to invited customers only.*

New Question type: Code Compiler

Code Compiler is an automatically marked question type for programming.

During exams, candidates can run and compile code using sample input and output test cases. Upon submitting, the code is automatically compiled and evaluated against separate marking test cases not available to candidates during the test.

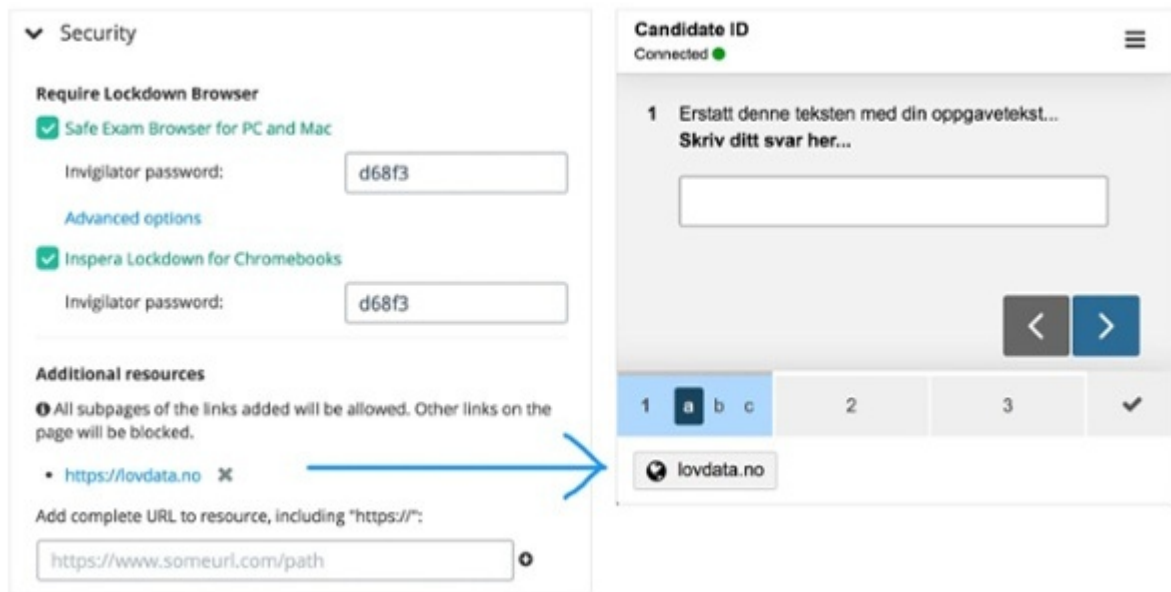

Secure links to external web resources during exams

Requires SEB 2.2 Windows, SEB 2.1 macOS or Inspera Lockdown for Chrome OS

Additional resources allow Planners to specify links that can be opened from a new task bar within the locked down environment during exams. A network filter checks requests so that candidates are not able to navigate away from the page specified. All links, except links to subpages are blocked.

Multiple web resources can be added to a test.

Bachelor and Master publishing

Support for including mandatory meta-data in Bachelor and Master thesis submissions now in closed beta.

Explanations API

Support for synchronizing Explanations using the Inspera API now in closed beta.

Other improvements

- Analytics: Improved p-value calculations for manually overridden marks
- Analytics: Fixed bug for questions getting order 0
- Scantron uploads: Improved handling of 500+ files

- Spellchecker: Enabling options to "Ignore" and "Ignore all"
- Matching questions: Improved image scaling in Author
- New grade scale: G-Ux-X (Sweden)
- FS Support for syncing tests from the past
- FS Improved sync when end time and duration fields are empty
- FS Person ID for admin users - Being rolled out
- FS Sync: Improved support for 1000+ candidates
- Help Panel updated

Known issue upon release:
New Help panel not rendering correctly for all accounts. Will be fixed during next week.
